

The Southern Maryland Dental Society Presents

PLATELET RICH FIBRIN RATIONALE AND CLINICAL USE

Course Description:

This course will introduce PRF to any clinician performing surgical procedures such as extractions, implants, and grafting. The rationale for PRF usage as well as its clinical benefits will be highlighted. Making surgical procedures less costly, more efficient resulting in shorter healing times, and fewer complications will be presented. Having a hands on segment will give the practitioner experience in drawing blood and manipulating the materials

Course Objectives:

1. Understanding the clinical uses of PRF
2. Understanding the wound healing benefits of PRF
3. Understanding the patients acceptance of and experience with this procedure
4. Gaining practical experience with drawing blood and utilizing the fibrin products

Jon M. Julian, DDS

University of Missouri at Kansas City, 1978
Lectures extensively in the USA and Europe on dental implants
Past implant instructor at The Dick Barnes Group
Currently practices in South Carolina
